

SEED MINI SWING

Kids have tons of work developing who they are, discovering the world, playing and learning... Choosing the right furniture will make their journey to become a grown-up a little easier. Transform their learning environment into the best possible playground. The SEED mini collection is all about comfort and style and is especially suited for the youngest ones. Various models in vibrant colors allow almost limitless combinations. The collection represents a style kids can grow into, ensuring a perfect fit for every learner from preschool to first grade.

The SEED MINI SWING chair is a sustainable but lightweight chair. It can be easily moved around, even by the smallest ones. The SEED MINI SWING is available with bamboo or plastic seat shell. It has an open front C-Frame to support movement.

MATERIAL

PLASTIC SEAT SHELL

The plastic shells are made of pure polypropylene. The applied technique of injection molding allows us to use this material in a massive form. The use of pure polypropylene is not only ecological, it's also pleasant to touch and softer compared to shells with addition of e.g. glass fibers. As a result the shells are very durable and perfectly recyclable. Color options are distinguished and formal or vibrant and lively, matching the interior concept. You can create a 'unified' look while combining shells and frames of the same color or obtain for a color combination to feature a contrast between the shell and frame. The front surface is smooth and easy to clean. While the back of the shell has a stylish, geometrical pattern.

ULTRALIGHT FRAME

The chair has a lightweight aluminum C- frame with a diameter of 25mm. The frame has an open front. This 'active' frame supports the movement of the user. The chairs can be stacked on the table, clearing the floor space, which facilitates easy cleaning of the room.
